

# **Mini-Quiz 1**

BIOL 4350/6350

Ecophysiology

**1** How does physiological ecology fit into the hierarchy of ecological studies?

**2** Write three examples of how plant ecophysiology affects your life.

**3** Chapin mentioned that we should consider plant physiological impacts on large scale processes (e.g., community and ecosystem processes) through the lens of biodiversity. What do you think he meant by that?

**4** Why might plant ecophysiology be important for predicting and preparing for the future effects of anthropogenic global change?
